

RAIN BARREL WORKSHOP DESCRIPTION

This is the 65-gallon barrel shown in granite (also on display by the registration desk). It is also available in Charcoal (a dark gray) and Terra Cotta (which is the color of your typical clay pot). The barrel connects to the existing downspout by drilling a hole in the downspout and attaching a connector hose. The price of the workshop includes the barrel, the kit to connect the barrel to the gutter (including the drill bit), and the class instruction on how to connect to your gutter.

This is the 50-gallon rain barrel shown in brown. This is a limited quantity barrel. This barrel can be attached as shown above or the downspout can be re-routed so that the water goes to the top center of the barrel as shown in the diagram.
