

Project Description – 24-104V – Graham Residence

Unilock Engineered retaining wall to help level out the backyard for more usable space. Patio and garden walls. Part of the retaining wall and proposed shed are within the 30' rear yard setback line. Due to the severe slope of the existing backyard, raising the grade and providing a flat, safe area to enter/exit the shed is crucial for overall usability. No construction is proposed within the 15' no build setback (area noted on plan).
