

We're working to improve the electric service for you and your neighbors.

We will be replacing underground electric cable in your area and this may affect your property.

IMPORTANT NEXT STEPS

- One week prior to construction, you will be notified if you are in the proposed construction path.
- We will work with Ohio Utility Protection Services to mark public utilities on your property such as electric, gas, phone, cable, water, sewer, etc.
- We need your help. **It's your responsibility to have your private underground facilities located and marked 2 days prior to our scheduled start day.** This includes items such as dog fences, private lighting, septic tanks, irrigation systems, etc. You can contact an underground locating company to assist you with this necessary and important step in the process.

Friendly Reminder:

Any obstructions in AEP Ohio's right of way that impedes access to safely maintaining and operating our facilities will be removed as specified in our right of way easement. Lawn and landscaping damage will be repaired by AEP Ohio or our subcontractor.

Thank you for your cooperation and understanding as we work to keep your power flowing!
